

SCW - SINGLE ARM CABLE WINDING MACHINES

The SCW range of single support cable winders are a compact unit with a surprisingly large handling capacity. They are suitable for any company concerned with the distribution, manufacture and users of cable, wire rope, flexible hose and other similar reel form materials.

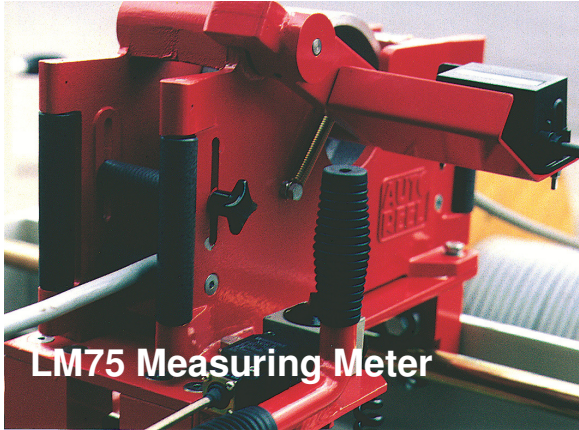

The unique design enables a single operator to handle up to a 500 kg drum with ultimate ease and efficiency. Because the shaft is only supported at one end the other end is free for loading and unloading. A manual linear traversing device and measuring meter are fitted allowing the operator to simultaneously measure and layer the cable neatly, giving an accurate cut and professional appearance to dispatch drums and coils.

The SCW series may be adapted to suit client's on-line production applications. The example shown is fitted with a dancer control arm for synchronizing the motor speed with the process line. Automatic cable layering is also included to allow the machine to operate unattended and give a neat appearance to dispatch drums.

An electrically interlocked guard is now standard on SCW machines

TECHNICAL INFORMATION

LM75 Measuring Meter

Collapsible coiling head

STANDARD FEATURES ON SCW MACHINES:

- Electronically controlled variable speed motor.
- Hydraulic drum raise/lower.
- Collapsible coiling head.
- Manual linear traversing device.
- LM75 Linear measuring meter.
- Drum axle and collets for most drum types and sizes.
- Electrically Interlocked safety guard.
- Safety, dead man's control switch.

OPTIONAL EXTRAS AVAILABLE:

- Motorized hydraulic pump in place of manual unit.
- Automatic cable layering.
- Cable cutters.

DRUM CAPACITY			
Model	Weight	Diameter	Width
SCW250	250kg	1100mm	650mm
SCW500	500kg	1100mm	650mm

MACHINE DIMENSIONS			
Width	Depth	Height	Weight
1520mm	1700mm	1220mm	790kg
